SoftTrade InfoTech | Jaipur (On-Site)

April 2026 – Present

Software Developer — Full-Time

- Architected and deployed production REST APIs in C# ASP.NET Core with middleware pipelines, structured error handling, and versioning across the ERP ecosystem.
- Implemented Redis caching for session management and high-frequency reads, reducing DB load significantly.
- Built event-driven workflows for real-time sync across accounting, inventory, and operations modules.

Angular & Flutter Developer — Internship

Jan 2026 – March 2026

- Engineered 50+ UI modules for an Accounts ERP system, cutting load times by 40% and reducing user clicks by 30%.
- Self-taught Flutter in under 24 hours and delivered a production-ready mobile ERP app from scratch with zero prior app development experience. Implemented RBAC, OAuth, secure API integration, WebSockets, real-time analytics, and complex accounting workflows end-to-end.

Achievements

- Won in GDG 15-Hour Hackathon among 50+ teams, built working product with 10K+ lines of code.
- Won **IPS Business College Hackathon**, recognized for strong performance in **DSA and Web Development** competition.

Skills

MERN, MEAN Stack, Full Stack Development
Data Structures and Algorithms
DataBase (SQL, NoSQL, PostgreSQL)
Mobile App Development (Flutter, Dart, CMake)
AI Implementation & AI Infrastructure

TypeScript, Manifest V3, Tailwind CSS, ShadCN
C, C++, C#, Python, Java, Angular, ASP.NET
Docker, Kubernetes, CI/CD, Github Actions
Version Control (Git & GitHub, GitLabs)
System Design, Cloud

Education

Rajasthan University, Jaipur, Rajasthan – Bachelors of Computer Science (BCA) – Aug 2023 – Aug 2026 (Scored – 8.5 CGPA)

Rajasthan University, Jaipur, Rajasthan – Masters of Computer Science (MCA) – Aug 2026 – Aug 2028

Projects

➤ **AI Workflow Automation Platform (Python, Full Stack, React, Node.js, FastAPI, MongoDB)**

- Built a **Zapier/n8n-style workflow automation platform** with a drag-and-drop visual builder using React Flow to create, manage, and execute complex multi-step workflows. Developed a **MERN** based workflow management, authentication (JWT), file storage, and execution orchestration across services & different processing using **Pillow, PyPDF2, WeasyPrint, Multer**.
- Engineered a **Python FastAPI execution engine** supporting **19+ automation tools** including AI (LLM & Vision), HTTP APIs, Google Sheets, databases, email, Slack, SMS, PDF/image processing, and custom code execution.
- Implemented **real-time workflow execution tracking, conditional logic, loops, data transformations, and multi-channel communication integrations** to automate end-to-end business processes.

Deployed - <https://ai-powered-workflow-automation-plat.vercel.app/>

➤ **Observability Platform — Mini Datadog (eBPF, Redis Streams, InfluxDB, PostgreSQL, Docker · Kubernetes, job_sub)**

- Architected a high-throughput observability platform handling millions of events with real-time stream processing, unified querying, and centralized debugging for distributed systems.
- Built a Python + eBPF monitoring agent, React 18 live dashboard, log streaming system, and rule-based alerting engine with Slack/Webhook integrations and frontend performance tracking SDK.
- Engineered ML-based anomaly detection, distributed tracing, RBAC, multi-tenant SaaS architecture, query optimization & caching, and a plugin ecosystem for Slack, Email, and PagerDuty integration

GitHub – <https://github.com/KunalKhuteta/Obeservability-Platform>

➤ **Focus and Habit Tracker Extension (Manifest V3, Node.js, Nodemailer, Google OAuth 2.0, Chart.js, Service Worker)**

- Engineered a **productivity extension** with a background Service Worker to track active tab domains in real time, enabling precise per-site browsing analytics using `local storage` with multi-session historical insights.
- Implemented focus timers and distraction blocking using Chrome `declarativeNetRequest` API for dynamic domain filtering. Integrated OTP email verification and password reset using Nodemailer and deployed backend services on Render.
- **Developed an analytics dashboard using Chart.js** to visualize productivity scores, browsing behaviour, and domain usage — featuring interactive charts with custom label plugins.
